PathwayAI · Recording scene 1 of 9

A story. Evidence. A next step.

Use PowerPoint Record with the prepared deck, or record the live app window in Zoom. Read only the right column. Keep the separate plain-text file for AI narration.

SHOW / CLICK — do not read aloud	SAY — ready to read aloud
Slide 1 App page: Start page Keep the opening page visible while introducing the three ideas and your background.	A patient’s story. A community’s evidence. A practical next step. Today, these often live in different places. What if we could bring them together, with the patient at the center? That is PathwayAI. I’m Yuwei Zhang from Team GreenAcorn. My background is in pathology, with experience at the National Institutes of Health and the Centers for Medicare and Medicaid Services. My experience taught me to examine evidence. Patients taught me to ask what it misses. A medical bill can tell us what a visit cost. It cannot tell us what it took to get there. The travel. The missed work. The unpaid help. The effort of telling the same story again. Let me show you how PathwayAI makes that journey visible.

PathwayAI · Recording scene 2 of 9

First: the patient story

SHOW / CLICK — do not read aloud	SAY — ready to read aloud
Slide 2 App page: Care & Support Click Prepare for care. Under Tell us what happened, paste the fictional story. Leave external AI off and click Organize My Story. Choose Past 30 days in the cost section.	First, the patient’s story. This is a fictional example. A person feels tired after an outdoor walk and wants help preparing for care. Over thirty days, they paid one hundred eighty dollars for care and forty-five dollars for travel, missed three workdays, and received eight hours of unpaid help. They write a short story. PathwayAI helps organize the details into a record they can check, change, and download.

PathwayAI · Recording scene 3 of 9

The reviewed personal card

SHOW / CLICK — do not read aloud	SAY — ready to read aloud
Slide 3 App page: Care & Support Open Review and download your visit and burden card. Show $180 care, $45 other payments, 3 missed workdays, 8 unpaid-help hours, and the $225 payment total.	Two hundred twenty-five dollars paid. Three workdays missed. Eight hours of unpaid help. We keep those measures separate. If something is unknown, it stays unknown.

PathwayAI · Recording scene 4 of 9

A useful request for support

SHOW / CLICK — do not read aloud	SAY — ready to read aloud
Slide 4 App page: Care & Support Under Choose the help you need, select Getting to care. Show A request you can use now and Download my support request. Do not send anything.	They can bring the summary to a visit, prepare a transport request, or use a benefits checklist. Nothing is sent automatically. They choose what to share.

PathwayAI · Recording scene 5 of 9

Second: community evidence

SHOW / CLICK — do not read aloud	SAY — ready to read aloud
Slide 5 App page: Community Burden & Action Click Explore community burden. Find Compare Dutchess and Orange counties. Keep Reported Lyme rate selected. Point to the reporting year.	Second, the community’s evidence. Here we compare Dutchess and Orange counties in New York. We use CDC, Census, and HRSA data alongside New York surveillance and published research. Together, these sources provide context about reported disease, healthcare resources, community conditions, and economic burden. Each source tells part of the story. None tells all of it. County averages do not describe every resident. One person does not represent the county. PathwayAI keeps these views separate, but makes both visible.

PathwayAI · Recording scene 6 of 9

Third: an action to evaluate

SHOW / CLICK — do not read aloud	SAY — ready to read aloud
Slide 6 App page: Community Burden & Action Find Patient voices → community action. Keep Getting to care as the priority. Point to the proposed action, people who could help, and measures.	Patient advocates reminded us to look beyond bills: unpaid care, daily life, and the effort of reaching support. Their feedback helped shape the caregiver options, simpler story entry, and support-preparation tools. Third, a practical next step.

PathwayAI · Recording scene 7 of 9

Comparable reports, clearly labeled

SHOW / CLICK — do not read aloud	SAY — ready to read aloud
Slide 7 App page: Community Burden & Action Open See how comparable patient reports could be summarized. Scroll to Synthetic summary of all six cards. Show the fictional label, five usable answers and one missing answer. Then point back to the proposed response or brief download.	This demonstration uses six invented records. Five report transportation barriers. One leaves the answer blank. These are examples, not collected patient findings. What could a community do with real, comparable reports? A care-navigation team could investigate help arranging suitable rides. Patients and caregivers would help decide whether that is the right priority. Local partners would check what they can provide. The downloadable planning brief names a proposed action, potential partners, and measures. Rides requested. Rides completed. Appointments attended. Needs still unmet. Make burden visible. Plan a response. Learn whether it helps.

PathwayAI · Recording scene 8 of 9

AI with human review

SHOW / CLICK — do not read aloud	SAY — ready to read aloud
Slide 8 App page: Community Burden & Action Open Ask AI about the public evidence. Show the question selector and explanation. A live response is optional: only show one if it succeeds, and identify generated text as AI output. Otherwise show the question without implying a response occurred.	Here, a person can ask AI a focused question about the public evidence. It uses a curated summary, keeps source links available, and does not receive private patient cards. Optional story AI requires permission. The local organizer works without it. AI can organize information, but people review its meaning. Data can reveal patterns, but it cannot replace lived experience. Models can explore possibilities, but people remain responsible for decisions. The patient remains at the center.

PathwayAI · Recording scene 9 of 9

Thank you for helping make it possible

SHOW / CLICK — do not read aloud	SAY — ready to read aloud
Slide 9 App page: Sources & Acknowledgements Choose Sources & Acknowledgements in the sidebar. Scroll to Acknowledgements for the thank-you. You can return to the title slide for the final PathwayAI line.	PathwayAI does not diagnose. Health benefits and savings need evaluation through a secure, consent-based pilot with patients, caregivers, and community partners. A clearer story. Evidence in context. An action to evaluate. To the patients and caregivers who shared their experiences, and the advocates and experts who offered their guidance: thank you. You helped shape PathwayAI. Your voices remind us what the data alone cannot tell us—and why this work matters. PathwayAI: Making the Hidden Patient Journey Visible—and Actionable. Thank you for helping make it possible.
