# PathwayAI

## Clearer communication. Better-informed community planning.

For county and state public health teams

1

### Support residents

- Tick-prevention information
- Reviewed visit and support summaries
- Notes in preferred or mixed languages

2

### Understand the evidence

- County surveillance and public-data context
- Study-based cost illustrations with sources
- Reported facts and assumptions kept separate

3

### Explore a local pilot

- Review materials with community partners
- Confirm services and referral pathways
- Measure understanding, task completion and support connections

### Current tools and future collaboration

Preparation tools and public-data reports work now. Shared patient reporting would require explicit consent, privacy safeguards and a defined pilot.

**Discuss a communication or usability pilot**
