PathwayAI: Making the Hidden Patient Journey Visible—and Actionable

OPTIONAL GENERAL INFLATION COMPARISON

Original study amounts remain in 2016 dollars. This comparison uses uploaded FRED monthly CPI-U data sourced from BLS.

2016 average: 240.00716666666666666666666667 (12 months).

2025 available-month average: 321.943 (11 months; October missing).

Factor = 2025 available-month average / 2016 average = 1.34138911129737098128319779 3

Arithmetic mean of available monthly index levels in each year; no missing values imputed.

This is not presented as a verified official annual-average CPI value. No October value is invented.

General purchasing-power comparison, not medical-care inflation, updated local costs or measured county spending.

Study figures: Hook et al. (2022). County cases: NYSDOH 2024, Dutchess 1,060; Orange 964. Full-precision factor applied before display rounding. Patient payments and other studies are unchanged.
