PathwayAI: five-minute script for all 17 slides

Target duration: 5:00. Times include short pauses and slide changes. Rehearse with your voice or AI narration; speech duration varies. If an audio segment runs long, adjust its delivery or shorten it before export. Automatic slide timings in the backup PowerPoint match this table. The visual deck remains free of speech text and notes.

Slide	Time	Length	What to show
1	0:00–0:25	25 sec	Start with the complete pathway
2	0:25–0:37	12 sec	Plan before going outdoors
3	0:37–0:55	18 sec	Prepare, check, and respond
4	0:55–1:19	24 sec	After a tick bite
5	1:19–1:29	10 sec	Record when and where
6	1:29–1:51	22 sec	Tell the story once
7	1:51–2:05	14 sec	Prepare questions about testing
8	2:05–2:17	12 sec	Include daily life and caregiver experience
9	2:17–2:39	22 sec	Review payments, work and unpaid help
10	2:39–2:54	15 sec	Prepare a request for support
11	2:54–3:06	12 sec	Prepare for a benefits conversation
12	3:06–3:22	16 sec	Compare county evidence
13	3:22–3:37	15 sec	Explore a cost illustration
14	3:37–3:55	18 sec	Connect needs with possible actions
15	3:55–4:10	15 sec	Summarize comparable reports
16	4:10–4:33	23 sec	Ask about the public evidence
17	4:33–5:00	27 sec	Patients and people remain at the center

Slide 1: Start with the complete pathway

0:00–0:25 · 25 seconds

SHOW: Start page

A patient’s story. A community’s evidence. A practical next step.

PathwayAI brings them together.

I’m Yuwei Zhang from Team GreenAcorn. My background in pathology and work at NIH and CMS connect clinical evidence with policy.

Our purpose is simple: make the hidden patient journey visible—and actionable.

Slide 2: Plan before going outdoors

0:25–0:37 · 12 seconds

SHOW: Plan time outdoors → Your outdoor plan

The pathway starts before illness. Choose where and when you will be outdoors, and what you plan to do. Prevention belongs here.

Slide 3: Prepare, check, and respond

0:37–0:55 · 18 seconds

SHOW: Learn & Prevent → Generate My Outdoor Tick-Prevention Plan

Prepare suitable clothing and an EPA-registered repellent, following product instructions. After outdoor activities, check your body, clothes, gear, and pets. Shower within two hours. These precautions support risk reduction; they do not guarantee protection.

Slide 4: After a tick bite

0:55–1:19 · 24 seconds

SHOW: After a tick bite → Remove → Record → Seek advice

If a tick is attached, use fine-tipped tweezers, grasp close to the skin, and pull upward steadily. Record when and where it happened. Seek medical advice promptly when appropriate, including after some high-risk bites. Do not wait for symptoms if you need prevention advice.

Slide 5: Record when and where

1:19–1:29 · 10 seconds

SHOW: Prepare for care → Tick encounter details

Keep the date and possible exposure location in your record. That place may differ from where you live or need care.

Slide 6: Tell the story once

1:29–1:51 · 22 seconds

SHOW: Prepare for care → Tell us what happened → Organize My Story

Now, a fictional person feels tired after an outdoor walk and wants help preparing for care. They enter a short story, including payments, missed work, and unpaid help. PathwayAI organizes the details for them to check, change, and download.

Slide 7: Prepare questions about testing

1:51–2:05 · 14 seconds

SHOW: Care & Support → Lyme tests → Before the test

The testing guide helps people prepare questions about symptoms, timing, the complete report, and costs. It supports a conversation with a clinician; it does not diagnose.

Slide 8: Include daily life and caregiver experience

2:05–2:17 · 12 seconds

SHOW: Care & Support → Daily life and caregiver experience

Some people need help reporting. Caregiver observations, the person’s daily-life difficulties, and the caregiver’s own experience can be recorded separately. Partial answers are welcome.

Slide 9: Review payments, work and unpaid help

2:17–2:39 · 22 seconds

SHOW: Care & Support → Review and download your visit and burden card

Here, the fictional person paid one hundred eighty dollars for care and forty-five dollars for travel: two hundred twenty-five dollars altogether. Three missed workdays and eight hours of unpaid help stay separate. Unknown answers stay unknown.

Slide 10: Prepare a request for support

2:39–2:54 · 15 seconds

SHOW: Care & Support → Choose the help you need → Getting to care

A record becomes more useful when it supports a next step. Here, someone can prepare a request for transport help, asking about eligibility, cost, booking, and a return trip.

Slide 11: Prepare for a benefits conversation

2:54–3:06 · 12 seconds

SHOW: Care & Support → Prepare for a benefits conversation

Benefits preparation helps people organize questions and relevant records for food assistance or disability support. The agency determines eligibility. Nothing is submitted automatically.

Slide 12: Compare county evidence

3:06–3:22 · 16 seconds

SHOW: Community Burden & Action → Compare Dutchess and Orange

Now we move to community evidence. We compare Dutchess and Orange counties using New York reports, federal CDC, Census and HRSA context, and published research. Source years and limits remain visible.

Slide 13: Explore a cost illustration

3:22–3:37 · 15 seconds

SHOW: Community → Estimated community cost: Dutchess and Orange

The two-county cost illustration is about four point one million dollars in twenty sixteen dollars. It multiplies reported cases by a study mean. It is not measured county spending.

Slide 14: Connect needs with possible actions

3:37–3:55 · 18 seconds

SHOW: Community → Patient voices → community action

The next question is practical: what support should a community explore? Patients, caregivers, and willing partners could review transport barriers, agree on a feasible response, and track rides, appointments, and needs still unmet.

Slide 15: Summarize comparable reports

3:55–4:10 · 15 seconds

SHOW: Community → See how comparable patient reports could be summarized

These six records are invented. Five have usable answers; one leaves fields unknown. They show how comparable reports could be summarized, not what everyone in the county experiences.

Slide 16: Ask about the public evidence

4:10–4:33 · 23 seconds

SHOW: Community → Ask AI about the public evidence

Optional AI explains a curated public evidence summary without receiving private patient cards. Story AI requires permission; the local organizer works without it.

AI can organize information, but people review its meaning. Data can reveal patterns, but it cannot replace lived experience.

Slide 17: Patients and people remain at the center

4:33–5:00 · 27 seconds

SHOW: Sources & Acknowledgements → Acknowledgements

Models can explore possibilities, but people remain responsible for decisions. The patient remains at the center.

To the patients, caregivers, advocates, and experts who shared experiences and guidance: thank you. You helped shape PathwayAI.

Making the Hidden Patient Journey Visible—and Actionable.

Thank you for helping make it possible.
