After a tick bite

Remove an attached tick. Record when and where you found it. Know when to seek care.

1. Remove the tick

If the tick is attached, use clean, fine-tipped tweezers. Grasp it close to the skin and pull upward with steady pressure. Clean the bite area and your hands. Do not burn the tick or cover it with oil or petroleum jelly.

2. Note when and where it happened

Write down the date and place of the bite. Watch for a new rash, fever, fatigue, or other symptoms in the following days and weeks. A Lyme rash does not always look like a bull's-eye.

3. Know when to get medical advice

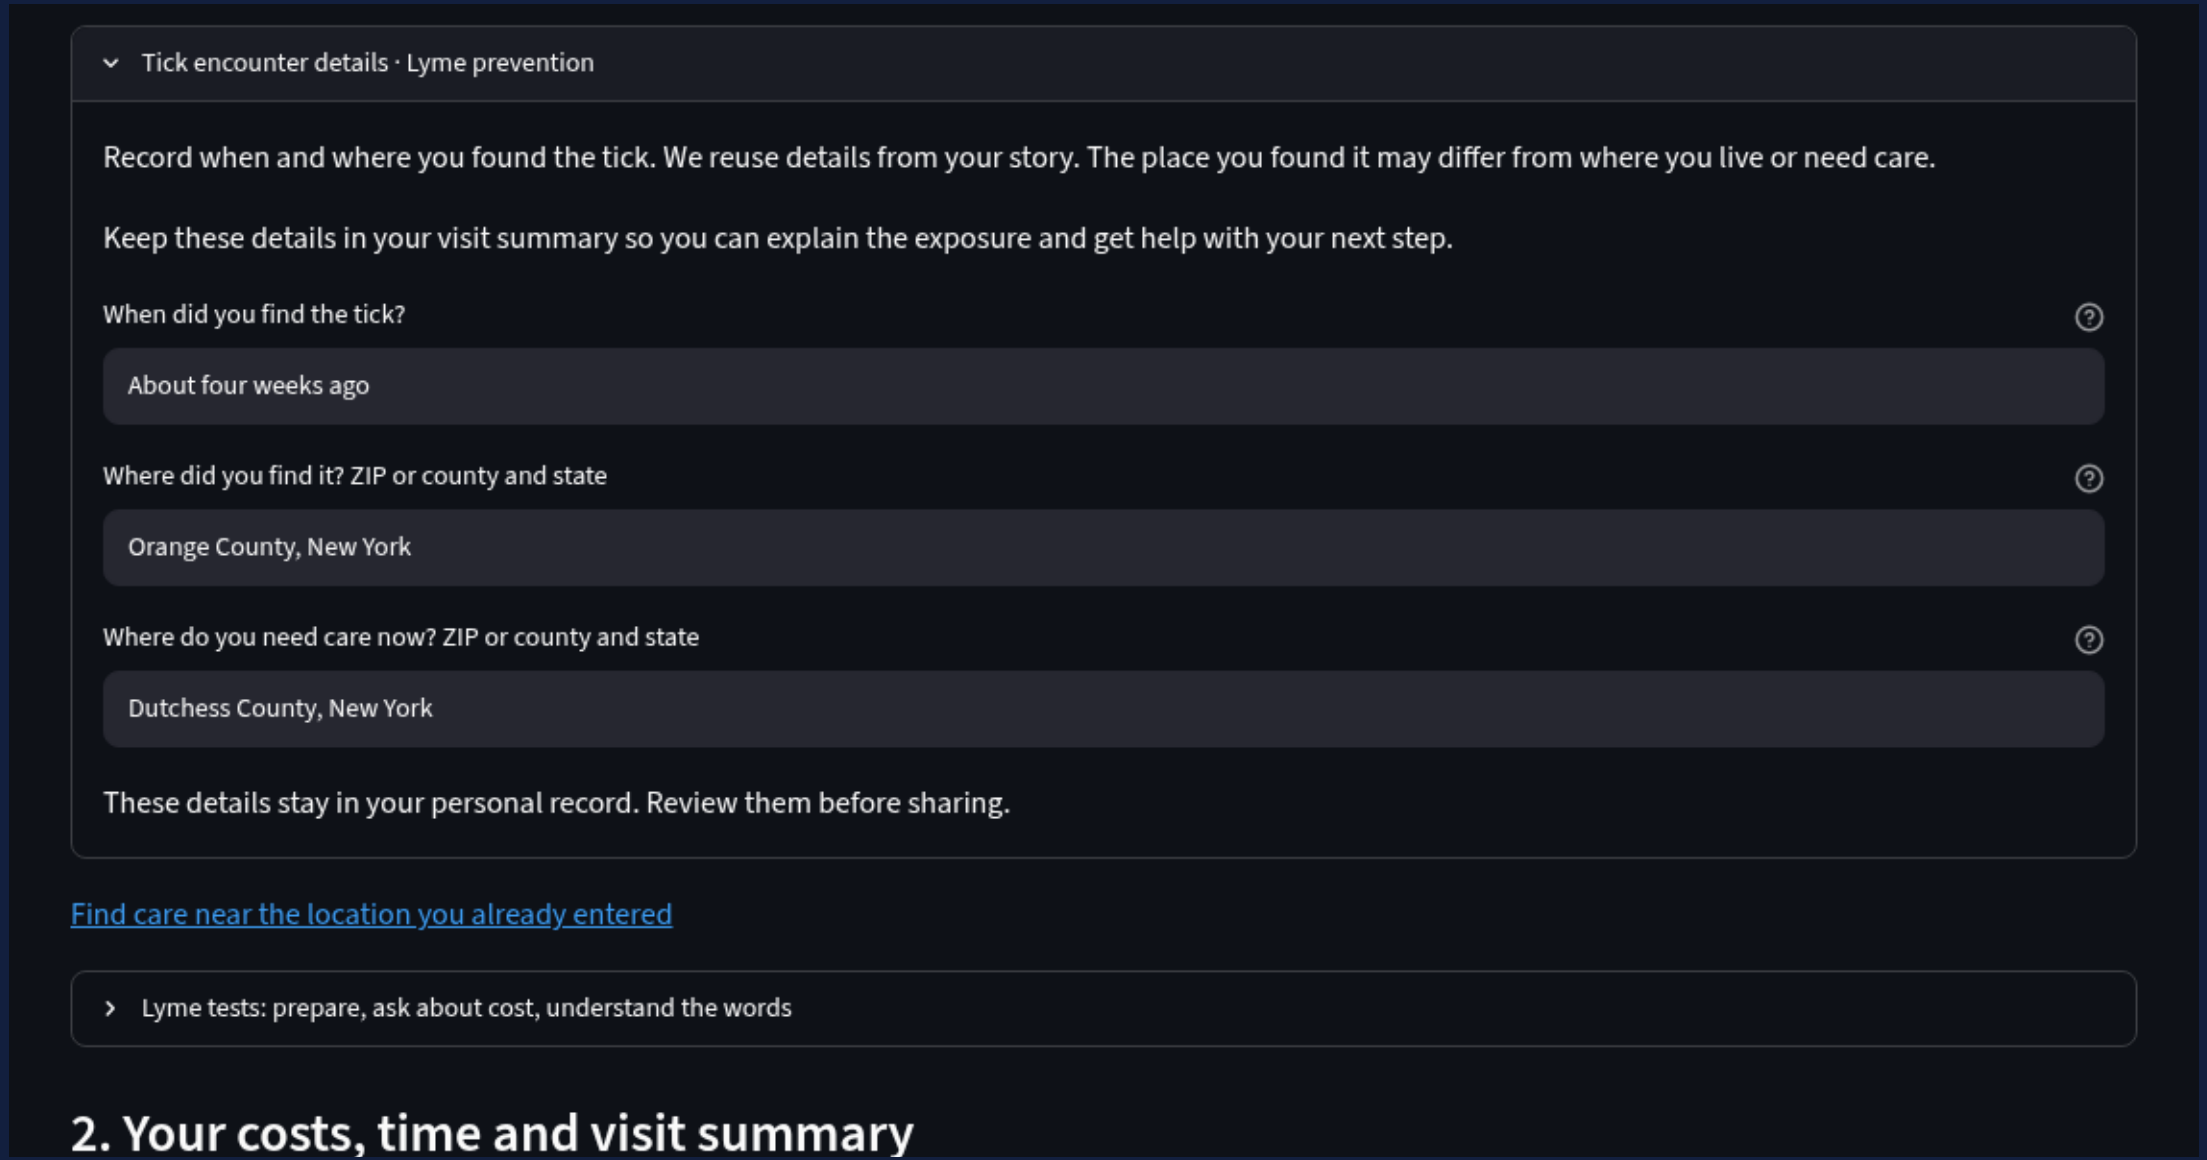

Contact a healthcare professional promptly if symptoms develop. After some high-risk bites, preventive antibiotics may be appropriate if started within 72 hours of tick removal; a clinician can assess whether this applies. Do not wait for symptoms if you need advice about prevention after a recent bite.

CDC: What to Do After a Tick Bite · CDC: Signs and Symptoms of Lyme Disease

Seek urgent medical attention for severe symptoms, such as trouble breathing, fainting, or new facial weakness. This app does not diagnose or recommend treatment.

Compare county evidence

Compare Dutchess and Orange counties

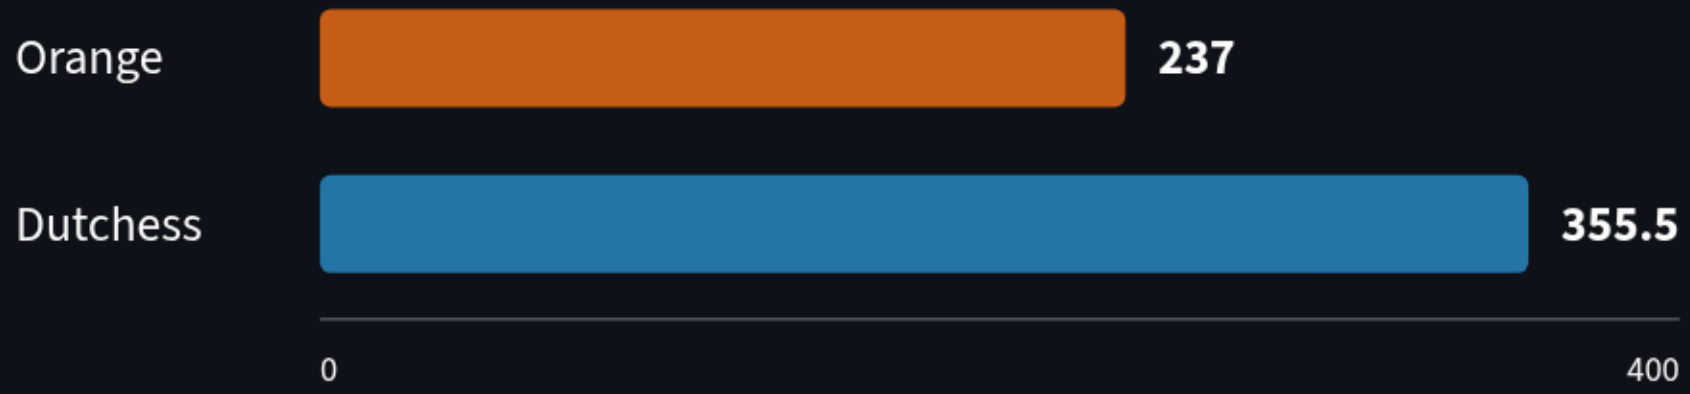

Compare

(•) Reported Lyme rate ( ) Sampled tick density ( ) Language context ( ) Disability context

Reported Lyme cases per 100,000 residents · NYSDOH 2024

Dutchess · cases per 100,000	Orange · cases per 100,000	New York State · cases per 100,000
355.5	237.0	109.8

Both counties reported higher Lyme rates than the statewide rate in 2024.

Reported Lyme rates over time

Patients and people remain at the center

- **CDC PLACES:** Loaded 2025 county release; modeled adult health context in the supporting Dutchess details. Separate from Census disability measures.
- **NYSDOH:** 2024 cases · 2024 rates. State surveillance supports county Lyme counts and comparisons.

- Hook et al. (2022) — Main basis for the county cost illustrations; 2016 dollars.
- Yu et al. (2026) — Medical episode costs and patient payments; original tables awaiting verification.
- Horn et al. (2025) — Follow-up symptoms and prescriptions; supports future modeling.
- Kugeler et al. (2021) — National estimate of Lyme diagnoses and treatment.

County illustrations multiply reported cases by published study costs. Cost perspectives, study populations and dollar years differ. Biobank findings have not been added to county cost totals. Additional references and calculation details appear beside the relevant evidence views.
