PathwayAI: 4:30 narration and slide guide

18 PowerPoint slides total. Deck slide 1 is your cover; deck slides 2–18 match demo images 1–17. The deck has no speech text or notes. Read only SAY; SHOW and time labels are navigation aids. Timing is a target; rehearse the actual narration before recording or exporting. This 4:30 version replaces the earlier five-minute script for this deck. NIH and CMS are omitted from the spoken introduction.

Deck	Image	Time	Length	What to show
1	Cover	0:00–0:25	25 sec	Cover: your introduction
2	1	0:25–0:31	6 sec	Start with the complete pathway
3	2	0:31–0:41	10 sec	Plan before going outdoors
4	3	0:41–0:57	16 sec	Prepare, check, and respond
5	4	0:57–1:19	22 sec	After a tick bite
6	5	1:19–1:28	9 sec	Record when and where
7	6	1:28–1:46	18 sec	Tell the story once
8	7	1:46–1:58	12 sec	Prepare questions about testing
9	8	1:58–2:09	11 sec	Include daily life and caregiver experience
10	9	2:09–2:27	18 sec	Review payments, work and unpaid help
11	10	2:27–2:40	13 sec	Prepare a request for support
12	11	2:40–2:51	11 sec	Prepare for a benefits conversation
13	12	2:51–3:06	15 sec	Compare county evidence
14	13	3:06–3:20	14 sec	Explore a cost illustration
15	14	3:20–3:37	17 sec	Connect needs with possible actions
16	15	3:37–3:51	14 sec	Summarize comparable reports
17	16	3:51–4:11	20 sec	Ask about the public evidence
18	17	4:11–4:30	19 sec	Patients and people remain at the center

Deck slide 1 / image Cover: Cover: your introduction

0:00–0:25 · 25 seconds

SHOW: Your title slide

I’m Yuwei Zhang from Team GreenAcorn. My background is in pathology and epidemiology.

Pathology taught me to look closely at disease. Epidemiology taught me to see patterns across communities. Patients reminded me that neither view tells the whole story.

PathwayAI connects those dots.

Let me show you.

Deck slide 2 / image 1: Start with the complete pathway

0:25–0:31 · 6 seconds

SHOW: Start page

Start before a bite. Continue through care, burden, and community action.

Deck slide 3 / image 2: Plan before going outdoors

0:31–0:41 · 10 seconds

SHOW: Plan time outdoors → Your outdoor plan

Choose where and when you will be outdoors, and what you plan to do. Prevention starts with preparation.

Deck slide 4 / image 3: Prepare, check, and respond

0:41–0:57 · 16 seconds

SHOW: Learn & Prevent → Generate My Outdoor Tick-Prevention Plan

Prepare protective clothing and an EPA-registered repellent. Follow product instructions. Afterwards, check your body, clothing, gear, and pets. Shower within two hours. These steps reduce risk; they cannot guarantee protection.

Deck slide 5 / image 4: After a tick bite

0:57–1:19 · 22 seconds

SHOW: After a tick bite → Remove → Record → Seek advice

If a tick is attached, grasp close to the skin with fine-tipped tweezers and pull upward steadily. Record when and where. Some high-risk bites need prompt clinical advice. Do not wait for symptoms if you need prevention advice.

Deck slide 6 / image 5: Record when and where

1:19–1:28 · 9 seconds

SHOW: Prepare for care → Tick encounter details

Keep the date and exposure location. These may differ from where you live or need care.

Deck slide 7 / image 6: Tell the story once

1:28–1:46 · 18 seconds

SHOW: Prepare for care → Tell us what happened → Organize My Story

Here is a fictional person preparing for care after feeling unwell. They write a short story, including costs and help received. PathwayAI organizes details they can check, correct, and download.

Deck slide 8 / image 7: Prepare questions about testing

1:46–1:58 · 12 seconds

SHOW: Care & Support → Lyme tests → Before the test

The testing guide helps people ask about timing, their complete report, and costs. It prepares a conversation; it does not diagnose.

Deck slide 9 / image 8: Include daily life and caregiver experience

1:58–2:09 · 11 seconds

SHOW: Care & Support → Daily life and caregiver experience

Caregivers can help describe daily-life difficulties. We label their observations and keep their own experience separate. Partial answers are welcome.

Deck slide 10 / image 9: Review payments, work and unpaid help

2:09–2:27 · 18 seconds

SHOW: Care & Support → Review and download your visit and burden card

This fictional person paid one hundred eighty dollars for care and forty-five for travel. That is two hundred twenty-five dollars. Three workdays and eight caregiver hours stay separate. Unknown answers stay unknown.

Deck slide 11 / image 10: Prepare a request for support

2:27–2:40 · 13 seconds

SHOW: Care & Support → Choose the help you need → Getting to care

Now the record supports a next step: a transport request asking about eligibility, cost, booking, and the return trip. The person chooses what to share.

Deck slide 12 / image 11: Prepare for a benefits conversation

2:40–2:51 · 11 seconds

SHOW: Care & Support → Prepare for a benefits conversation

Benefits preparation helps organize questions and records for food assistance or disability support. Agencies decide eligibility. Nothing is submitted automatically.

Deck slide 13 / image 12: Compare county evidence

2:51–3:06 · 15 seconds

SHOW: Community Burden & Action → Compare Dutchess and Orange

Now compare Dutchess and Orange counties. CDC, Census, and HRSA data add context alongside New York surveillance and published research. County averages do not describe every person.

Deck slide 14 / image 13: Explore a cost illustration

3:06–3:20 · 14 seconds

SHOW: Community → Estimated community cost: Dutchess and Orange

This illustration multiplies reported cases by a study mean: about four point one million dollars, in twenty sixteen dollars. It is not measured county spending.

Deck slide 15 / image 14: Connect needs with possible actions

3:20–3:37 · 17 seconds

SHOW: Community → Patient voices → community action

What could a community do next? Patients, caregivers, and willing partners could review transport barriers, choose a feasible response, and track rides completed, appointments attended, and unmet needs.

Deck slide 16 / image 15: Summarize comparable reports

3:37–3:51 · 14 seconds

SHOW: Community → See how comparable patient reports could be summarized

These six records are invented. Five have usable answers; one leaves fields unknown. Comparable reports could inform planning, but voluntary reports cannot represent everyone.

Deck slide 17 / image 16: Ask about the public evidence

3:51–4:11 · 20 seconds

SHOW: Community → Ask AI about the public evidence

Optional AI explains curated public evidence without receiving private patient cards. Story AI requires permission; the local organizer works without it.

AI can organize information, but people review its meaning. Data can reveal patterns, but cannot replace lived experience.

Deck slide 18 / image 17: Patients and people remain at the center

4:11–4:30 · 19 seconds

SHOW: Sources & Acknowledgements → Acknowledgements

Models explore possibilities; people remain responsible for decisions. The patient stays at the center.

To patients, caregivers, advocates, and experts: thank you. Your experiences and guidance helped make PathwayAI possible.

Making the Hidden Patient Journey Visible—and Actionable.
