My Outdoor Preparation Plan

Created: 2026-10-20 (UTC)

YOUR PLANS

Destination: New York

Destination state: New York

Month: June

Planned activity: Hiking or camping

BEFORE AND DURING OUTDOOR ACTIVITIES

- Pack an EPA-registered insect repellent and follow its label instructions.
- Consider protective clothing and gear treated with 0.5% permethrin; follow product instructions. Do not apply permethrin to skin.
- Avoid brush and tall grass where possible; walk in the center of trails.
- Pack clean, fine-tipped tweezers.

AFTER OUTDOOR ACTIVITIES

- Check your body, clothing, gear and pets for ticks. Check children too.
- Shower within two hours of coming indoors.

IF YOU FIND AN ATTACHED TICK

- Remove it promptly with clean, fine-tipped tweezers. Grasp close to the skin and pull upward with steady, even pressure.
- Clean the bite area and your hands. Do not burn the tick or cover it with oil or petroleum jelly.
- Record when and where you found it and when you removed it.

WHEN TO CONTACT A HEALTHCARE PROFESSIONAL

- Contact a clinician promptly for a new rash, fever or other symptoms after possible tick exposure. A Lyme rash does not always look like a bull's-eye.
- After some bites, preventive antibiotics may be appropriate within 72 hours of tick removal. Ask a clinician promptly; do not wait for symptoms to ask. Not every bite needs antibiotics.

- For sudden facial drooping, chest pain, severe trouble breathing or fainting, call 911. These may be emergencies unrelated to a tick bite.

- If you lack insurance, ask a community health center about care and income-based discounts. Care is not automatically free.
